New Release! v2.6.5

In this release, we've added a Demo Mode to our LMS and our VR application so that people of the community can get a taste for what Next World has to offer before signing up with us, a way to try-before-you-buy!

Platform/LMS

- Demo Mode - you can now view a version of the LMS without having signed up! The LMS will show demo data and acts as a sandbox to play around with all features and get a taste of what Next World has to offer before you buy
- Improvements including:
  - Requests to generate a CSV over a certain size will be emailed instead of downloaded
  - You can see the scores of various data points for each session in your request in the Sessions CSV
  - The Session Insights view now shows how many questions were answered/correct out of how many were available
- Various bugfixes

Agent/Home

- Demo Mode - you can now download and install our Next World Agent application on your device and be able to get a taste for what Next World has to offer without needing to sign up! You can play our Slips, Trips and Falls experience in-full as part of the demo, and can also try out a demo experience from our Soft Skills partner Bodyswaps!

A Heck of a lot more is happening behind the scenes too, bringing more functionality and user experience improvements, some of which have been suggested by you! Continue providing us with feedback, letting us know of any issues you experience, and we take all feature suggestions into consideration! Watch this space for more updates soon.

That's all for now!
