

New Release! v2.5.2

In this release, we've added brand new experience information pages along with a refreshed look for the Session view.

Experience Overview

Each Experience now has an associated Overview page, with information detailing what a trainee should expect to learn throughout the experience, along with the languages available for that experience. These will be a fantastic resource for trainers to learn about the experience prior to having their trainees play them.

They can be accessed through the **Experiences** link in the navigation menu, or through this link

<https://nwxr.app/experiences>

Individual pages will be rolled out incrementally as their content is updated.

Fire Hazards

Cultivate your expertise in workplace fire safety in this immersive learning experience. You'll receive training to learn the fundamentals of identifying and mitigating fire hazards in the workplace. Once you're confident in your abilities, put them to the test in a solo investigation of a worksite.

OVERVIEW

COURSE GUIDE

About this course

The risk of fire related hazards is prevalent not only in workplaces dealing with flammable chemicals or combustible materials, but also in offices and other lower risk environments. It is important for all individuals, regardless of their occupation or workplace, to be aware of potential fire hazards and how to respond in case of a fire emergency.

Next World's VR Fire Hazard Identification training includes an interactive walkthrough of the six classes of fuel, how to inspect fire equipment for safe use, how to identify common fire hazards, and what employees can do to minimise the risk of a fire crisis.

Learning Outcomes

- ✓ Identify the four elements of fire (fuel, oxygen, heat, and chemical chain reaction) and explain their role in the combustion process.
- ✓ Recognise and classify different types of fuel (Class A to Class F) based on their characteristics and understand the implications for fire safety.

Experience Course Guide

Along with an overview page, most Next World experiences now have an associated Course Guide view. This view enables trainers to seek and understand the questions and scenarios their trainees will encounter during an Experience.

Course Outline

This course consists of multiple segments, designed to teach, test and evaluate a trainee on their prior knowledge, learned knowledge and skills, and ability to think and act in the moment during the final test.

Trainees are typically presented with fire hazard targets throughout the experience, and are required to capture each target in a photo in order to trigger follow up questions about these hazards.

A training guide is provided for trainers below for all targets, questions and answers within this course.

Discovery

In this segment, trainees are tested on their subject matter knowledge prior to commencing any training.

Which of following isn't an element that is necessary to sustain a fire?

Which class of fire includes items like cooking oil and fats?

When is it acceptable to use a damaged fire extinguisher?

Exam

In this segment, trainees are asked to complete various tasks toward their final assessment. This segment is scored and will dictate their final score.

TARGET

What makes this a hazard?

DISCOVERY

Session View (Refreshed look and feel)

With the new updates to the Experience Overview and Course Guide, we have updated the Session view to share the same look and feel as the new features. It has also received a small information overhaul, with information about the device and language the session was played in now available.
