

Finding training insights and data

One of the most valuable aspects of VR safety training is the ability to collect a user's training session data and then analyse that data to draw conclusions, giving us a much more in-depth insight into their learning. From the **Training Insights** page, you are able to review the results of your users when they complete a course.

How to access training insights

You can access these sessions by clicking on the **Training Insights** tab on the left navigation bar. This will bring up a list of all the training sessions completed by users in your organisation.

By default, session will be sorted by most recent sessions first, however you can use the search bar to search for a particular member, or use the filter icon to filter by date range or experience. You can also choose to see members of the organisation's divisions, in-progress training or incomplete sessions.

The screenshot shows the 'NextWorld Virtual Reality' dashboard. On the left is a dark sidebar with a navigation menu. The 'Training Insights' option is highlighted with a mouse cursor. The main content area is titled 'Dashboard' and contains sections for 'Top Experiences' and 'Recent Sessions'. The 'Recent Sessions' section features a table with columns: EXPERIENCE, SESSION COUNT, TRAINEE COUNT, LAST TRAINEE, and LAST SESSION. Below the table, a message states 'No items found'. The footer includes the 'NextWorld Virtual Reality' logo, version 'v1.1910', and links for Support, Contact Us, Privacy Policy, and Terms of Service.

From here, you can click on a session to view its results.
